

Rayyan Ahemad

Paris, France | rayyanahemad04@gmail.com | linkedin.com/in/rayyan-ahemad | github.com/xlucifer65

Master's candidate in AI Systems building production ML and agentic-AI systems—retrieval, orchestration, and full-stack platforms designed to be evaluated and monitored, not just shipped.

Education

EPITA – School of Engineering & Computer Science

M.S. in Artificial Intelligence Systems (CGE-accredited)

Paris, France

Feb. 2026 – Sept. 2027 (in progress)

Woxsen University

B.Tech. in Computer Science Engineering

Hyderabad, India

2021 – 2025

• **Published, IEEE Conference Paper:**

Web-Based Interface for Detecting and Classifying Solar PV Panel Defects Using a CNN Model (2025) | [Google Scholar](#)

• Coursework: Machine Learning, Deep Learning, NLP, Unsupervised Learning, Data Structures, Computer Networks

Experience

Full Stack Developer

Aug. 2024 – Feb. 2025

Saavik Solutions

Hyderabad, India

- Built and shipped a production consultancy website (EA Overseas) end-to-end with a MERN-stack team, developing backend APIs and interactive frontend components
- Developed core logic for GhostTalk, a real-time chat-matching product, including WebSocket-based live matching and AI-driven message moderation

Technical Skills

Languages: Python, TypeScript/JavaScript, Java, SQL

AI/ML: scikit-learn, pandas, NumPy, CNNs, unsupervised learning (clustering, dimensionality reduction), LLM agents (Anthropic Claude API), retrieval-augmented generation

Backend: FastAPI, Node.js/Express, REST API design, SQLAlchemy, Pydantic, PostgreSQL

Data & MLOps: Apache Airflow, Great Expectations, Grafana, feature engineering, Docker & Docker Compose

Frontend: React, Next.js, TypeScript, Ant Design, Tailwind CSS

Testing & Tooling: Git, pytest, Vitest, React Testing Library, Alembic migrations

Projects

LinkedIn HR Agent | Python, FastAPI, Claude API, RAG, Next.js, Docker

- Built an agentic content system that picks topics from a service catalog (with memory to avoid repeats), grounds generation in a pgvector knowledge base via local-embedding RAG, and drafts LinkedIn posts with Claude tool use
- Designed the agent as separable services (generation, retrieval, image, scheduling, memory) behind a FastAPI backend, with a Next.js dashboard for review and a Postgres-backed knowledge store
- Containerized the full stack with Docker Compose and configured deployment targets (Fly.io, Railway, Vercel)

EPITA Class Scheduling System | Python, FastAPI, Z3 SMT Solver, React, PostgreSQL

- Built a university scheduling engine that encodes room, teacher, and timetable constraints for the Z3 SMT solver to auto-generate conflict-free weekly schedules
- Structured the backend with a repository/service layer over SQLAlchemy models and Alembic migrations, exposing a versioned REST API (courses, teachers, rooms, timeslots)
- Covered the system with pytest unit/integration tests and Vitest/React Testing Library on the frontend; shipped as a Dockerized, multi-container app

House Price MLOps Pipeline | Python, pandas, Airflow, Great Expectations, Grafana

- Designed a shared feature-engineering module with an explicit feature contract (valid ranges per field), so features are built identically offline and online
- Consumed that contract identically from training, the model-serving API, and Airflow DAGs to guarantee train/serve parity
- Wired Great Expectations data-quality checks and Grafana dashboards into the pipeline to catch bad or drifting input data before it reaches the model

Valeurs Foncières – French Real Estate Analysis | Python, pandas, Jupyter – 3-person team

- Loaded, merged, and cleaned 5 years (~20M rows) of French government real-estate transaction data (data.gouv.fr), authoring the ingestion and cleaning notebooks
- Established the shared repo structure and data-cleaning conventions the rest of the team built its EDA and feature-engineering work on top of
